Indoor Air Quality (IAQ)

With funding from the U.S. Environmental Protection Agency, our specialists have assessed more than 300 Northwest schools and recommended practices and procedures to improve indoor air quality. For more information see our publication titled School Indoor Air Quality Assessment and Program Implementation (159k Adobe® &Acrobat® .pdf).

Our other IAQ activities include the EPA-sponsored HELP for Kids Project. As part of this effort, project organizers have developed a series of forms, checklists and handouts to help create healthier environments for children in schools, child care centers and homes.

“It’s been a long strange road . . . .”

EPA Tools for Schools Program

Contains an abundance of information

(can be overwhelming)

Indoor Air Quality

ROAD MAP

IAQ *Simplified*

Fear
Pollutants
Molds
Pollutants
Mistrust
Odors
Risks
IAQ

IAQ *Simplified*

Dry

Clean

Comfortable

Control pollutants *

Adequate ventilation

* Each pollutant needs a control strategy

EPA adopted our idea = “6 Technical Drivers”

Created "Three Step" Implementation IAQ Program

1. *IAQ Coordinator*
2. *Walk- Through Assessments*
3. *Adopt an IAQ Program*

3-Step IAQ Implementation

Your program will likely be

- Easier
- More Effective
- Less Expensive
- Personally Rewarding

Adoption of IAQ Programs

Public relations & communication

Establishes boundaries on "expectations"

Sets benchmarks and accountability

Documentation

Baseline conditions

Goals for improvements

Avoids claims of negligence

Attracts resources

Breaking the "schools will never let us inside" barrier

(down in CA, it still ain't broke)

Got BUY-in from key Administrators

(but didn't burn any bridges along the way if we couldn't)

Sold the pro-active approach

Walk-Throughs:

Non-threatening
Non-regulatory

The Power of The "Walk-Through"

- Identifies problems and deficiencies
- Provides *baseline information*
- *Shapes each IAQ Program's* content and priorities

Essential step to a practical & effective IAQ Program

use all day---the bus and paren
will need to line up outside.

- Don't forget to vote today!

March 8, 2001

Good Morning Joyce,

Just letting you know, so that you can let your staff know, that on Tuesda
approximately 9:30 a.m., they again will be doing an indoor air quality wal
buildings (barring that we don't get snow again). Dave Blake, Northwest A
Cooper, Maintenance and possibly two others will be doing the walk throu
"tools for Schools" kit available.

If you have any questions please call John Cooper 507-8064.

Thank You,
Mary
Maintenance Dept.

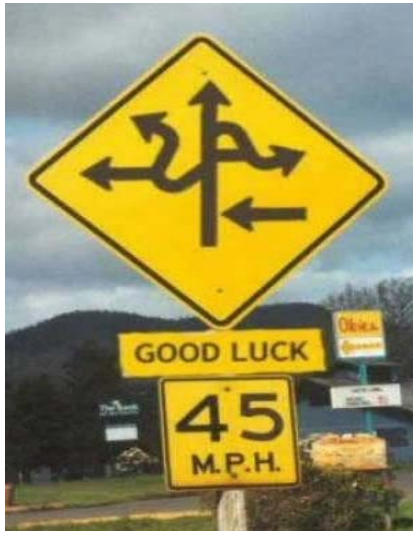
OK, we're not done with IAQ

What to do?



OK, we're not done with IAQ

What to do?

Routine monitoring and benchmarking

Communication & "Marketing"

Integrate into "sustainability

Intake "out-takes":

Thousands of rooms 'freshened' by finding flaws

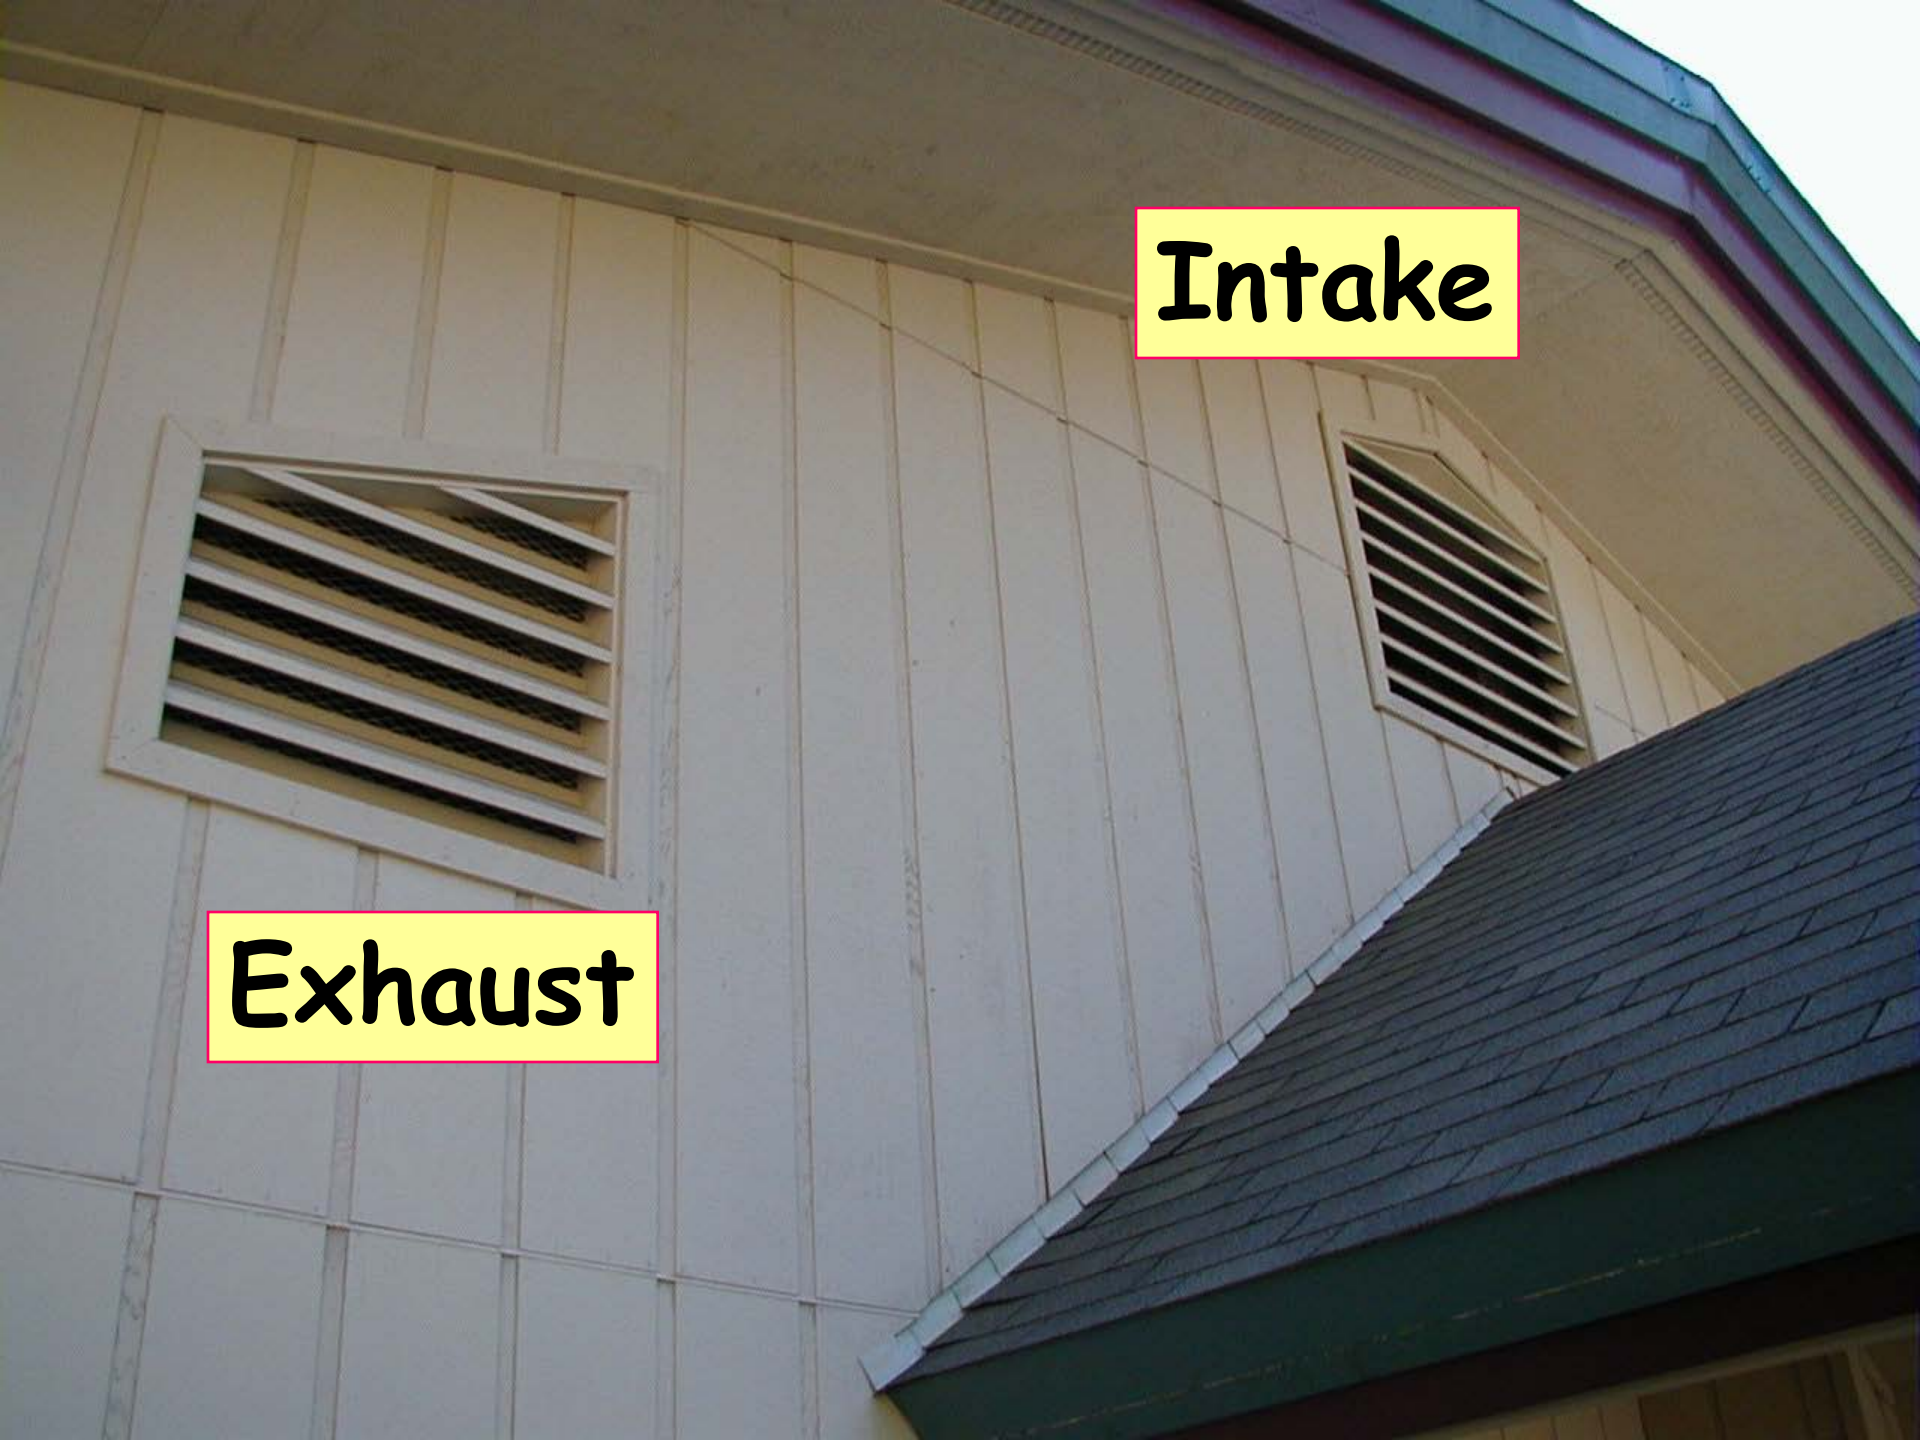
Air intake
Habitat for pests

Air Intake

SCHOOL BUS
Air Intakes

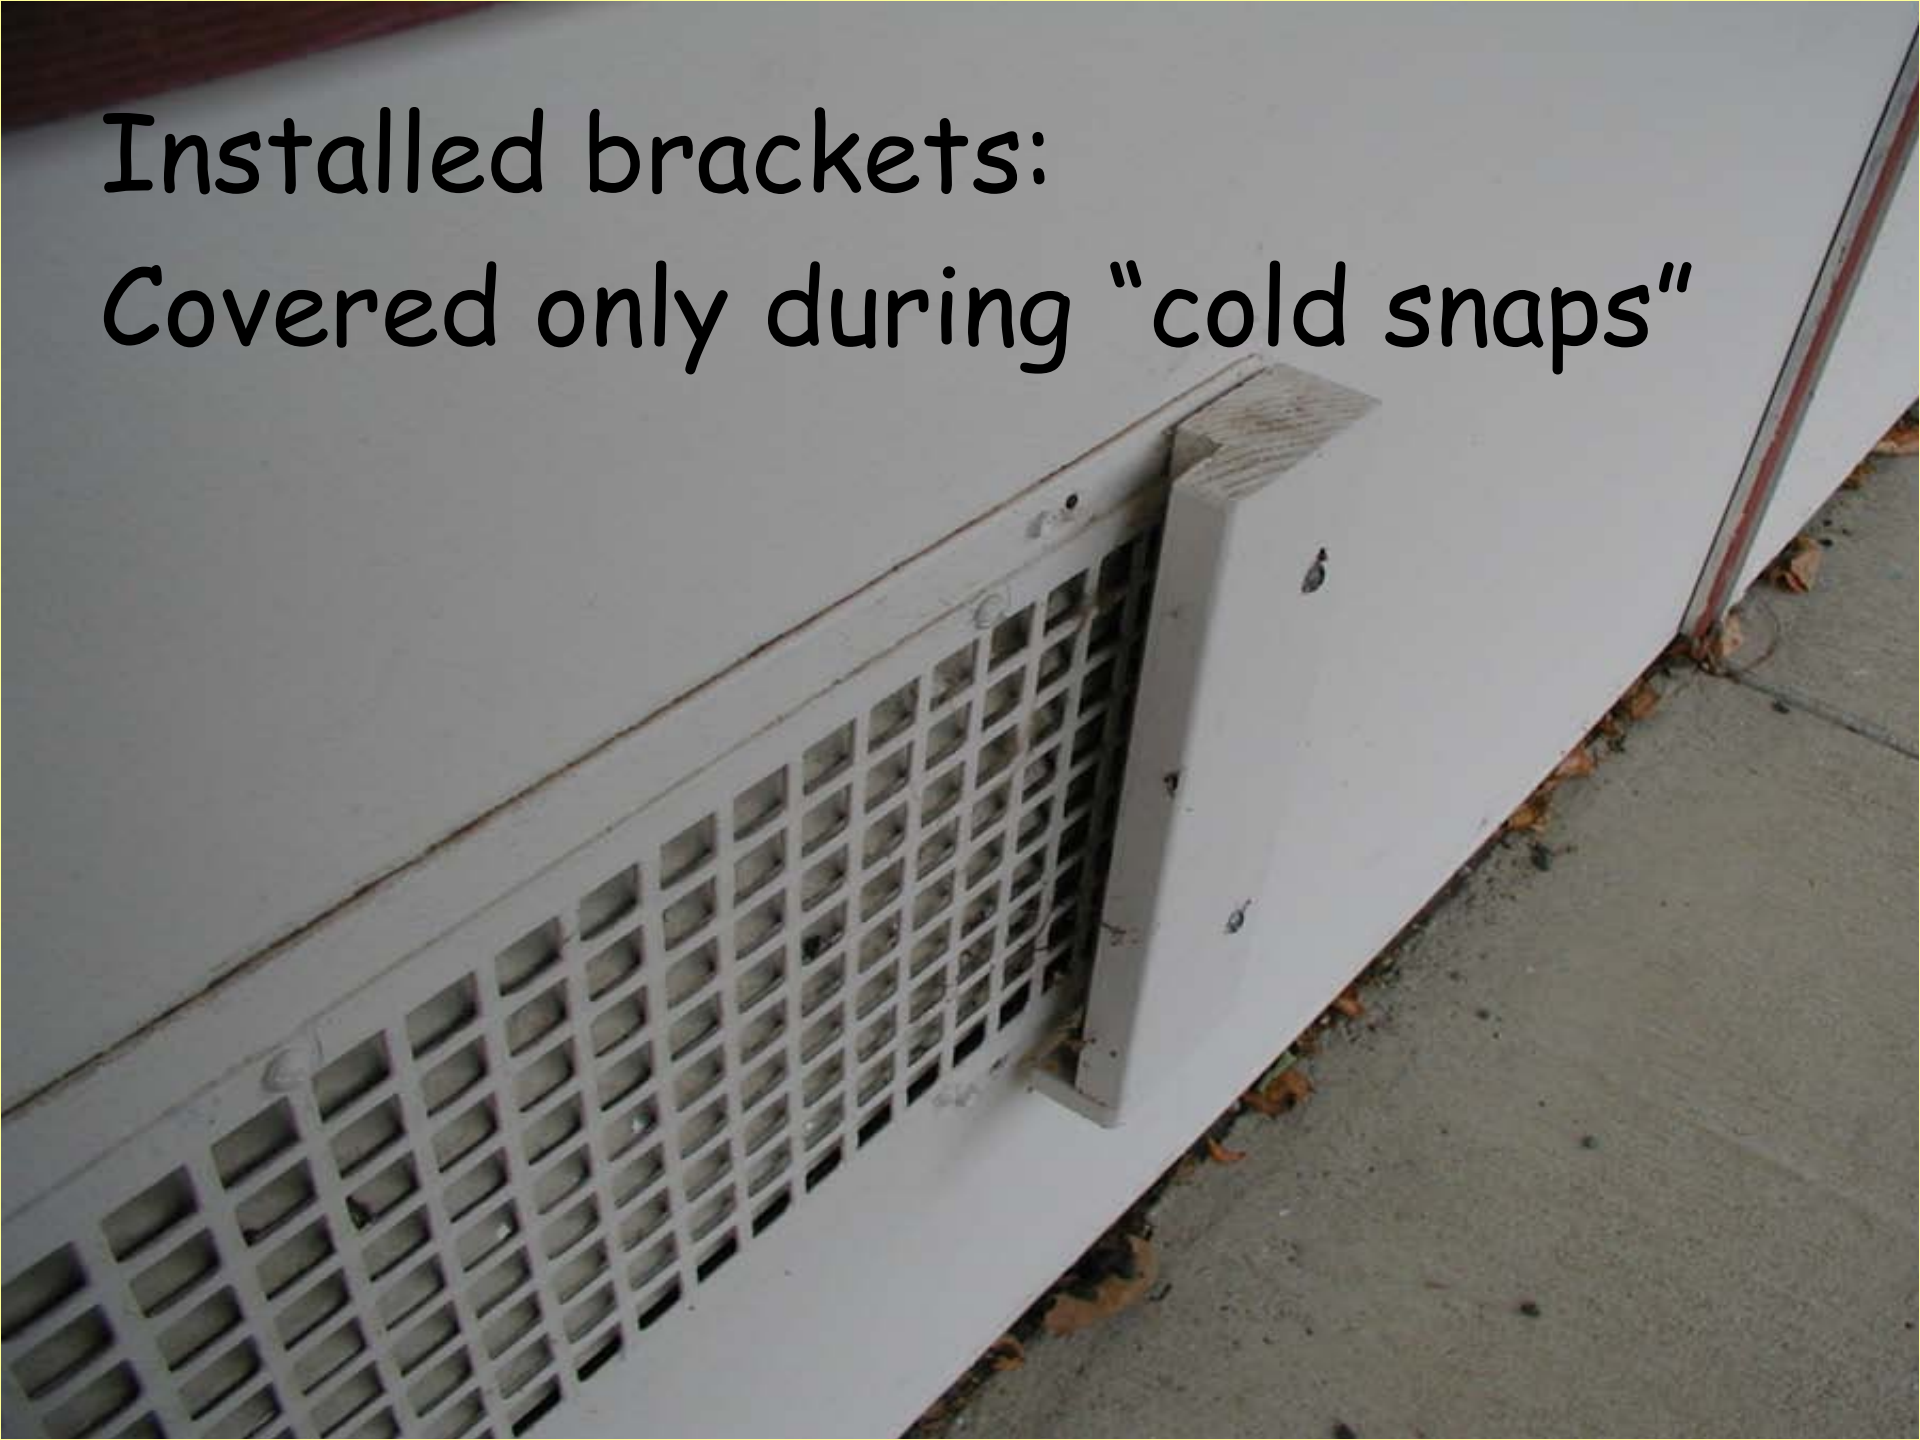
BUS
S OP
BUS DRIVERS

Air Intake
Exhaust



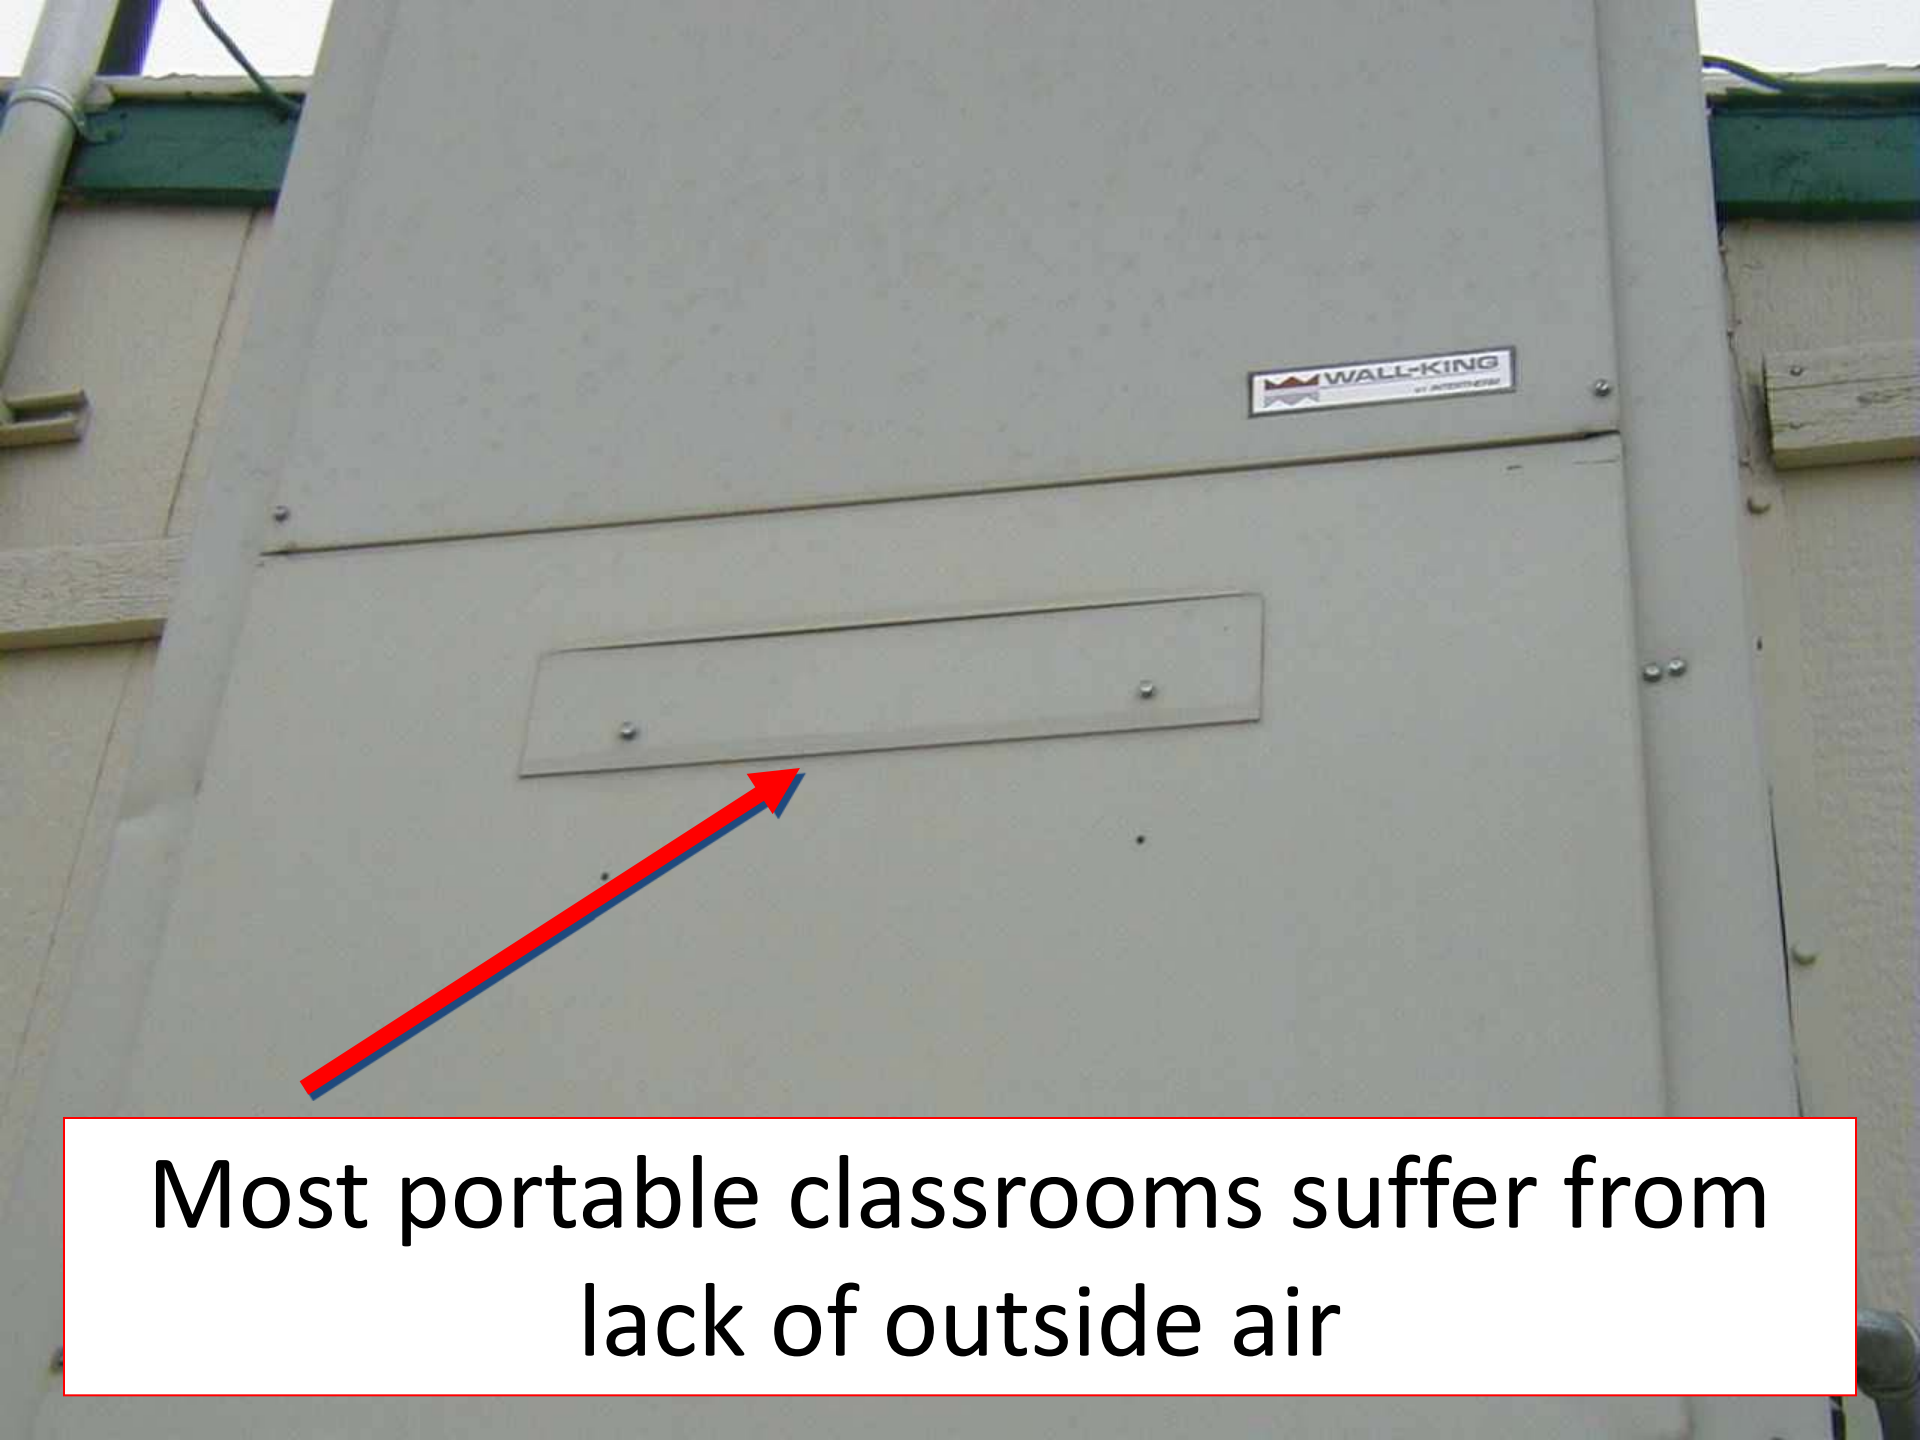
Intake
Exhaust

fresh air intakes covered for the “season”



Installed brackets:
Covered only during "cold snaps"

note conditions and ask questions



Most portable classrooms suffer from lack of outside air

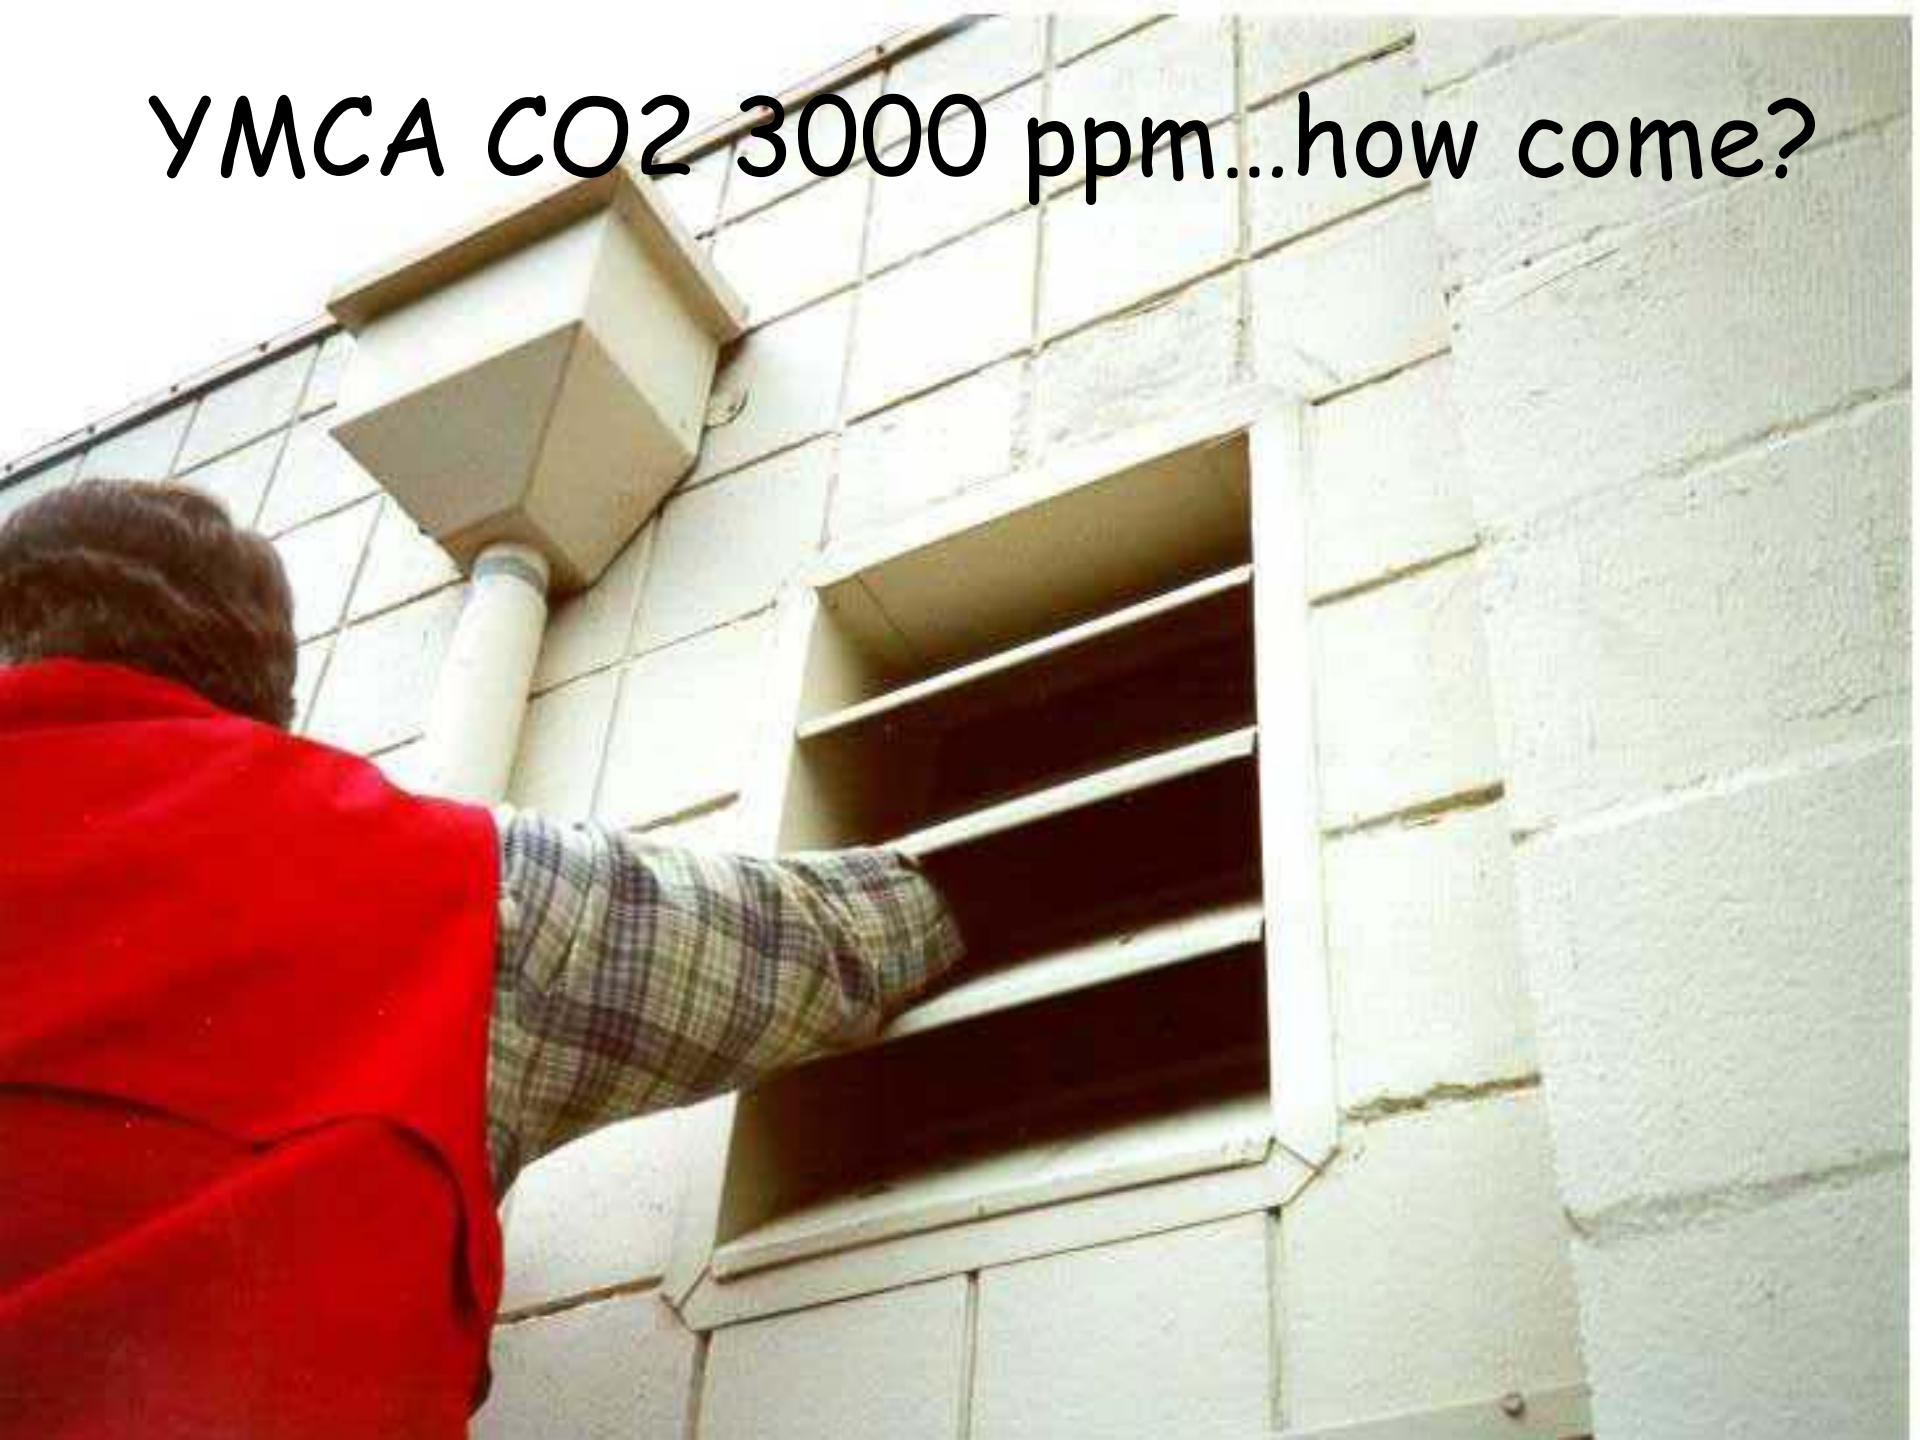
Hey, the dampers are open . . . but the CO2 is still too high

Pencil hole though plugged OSA grill

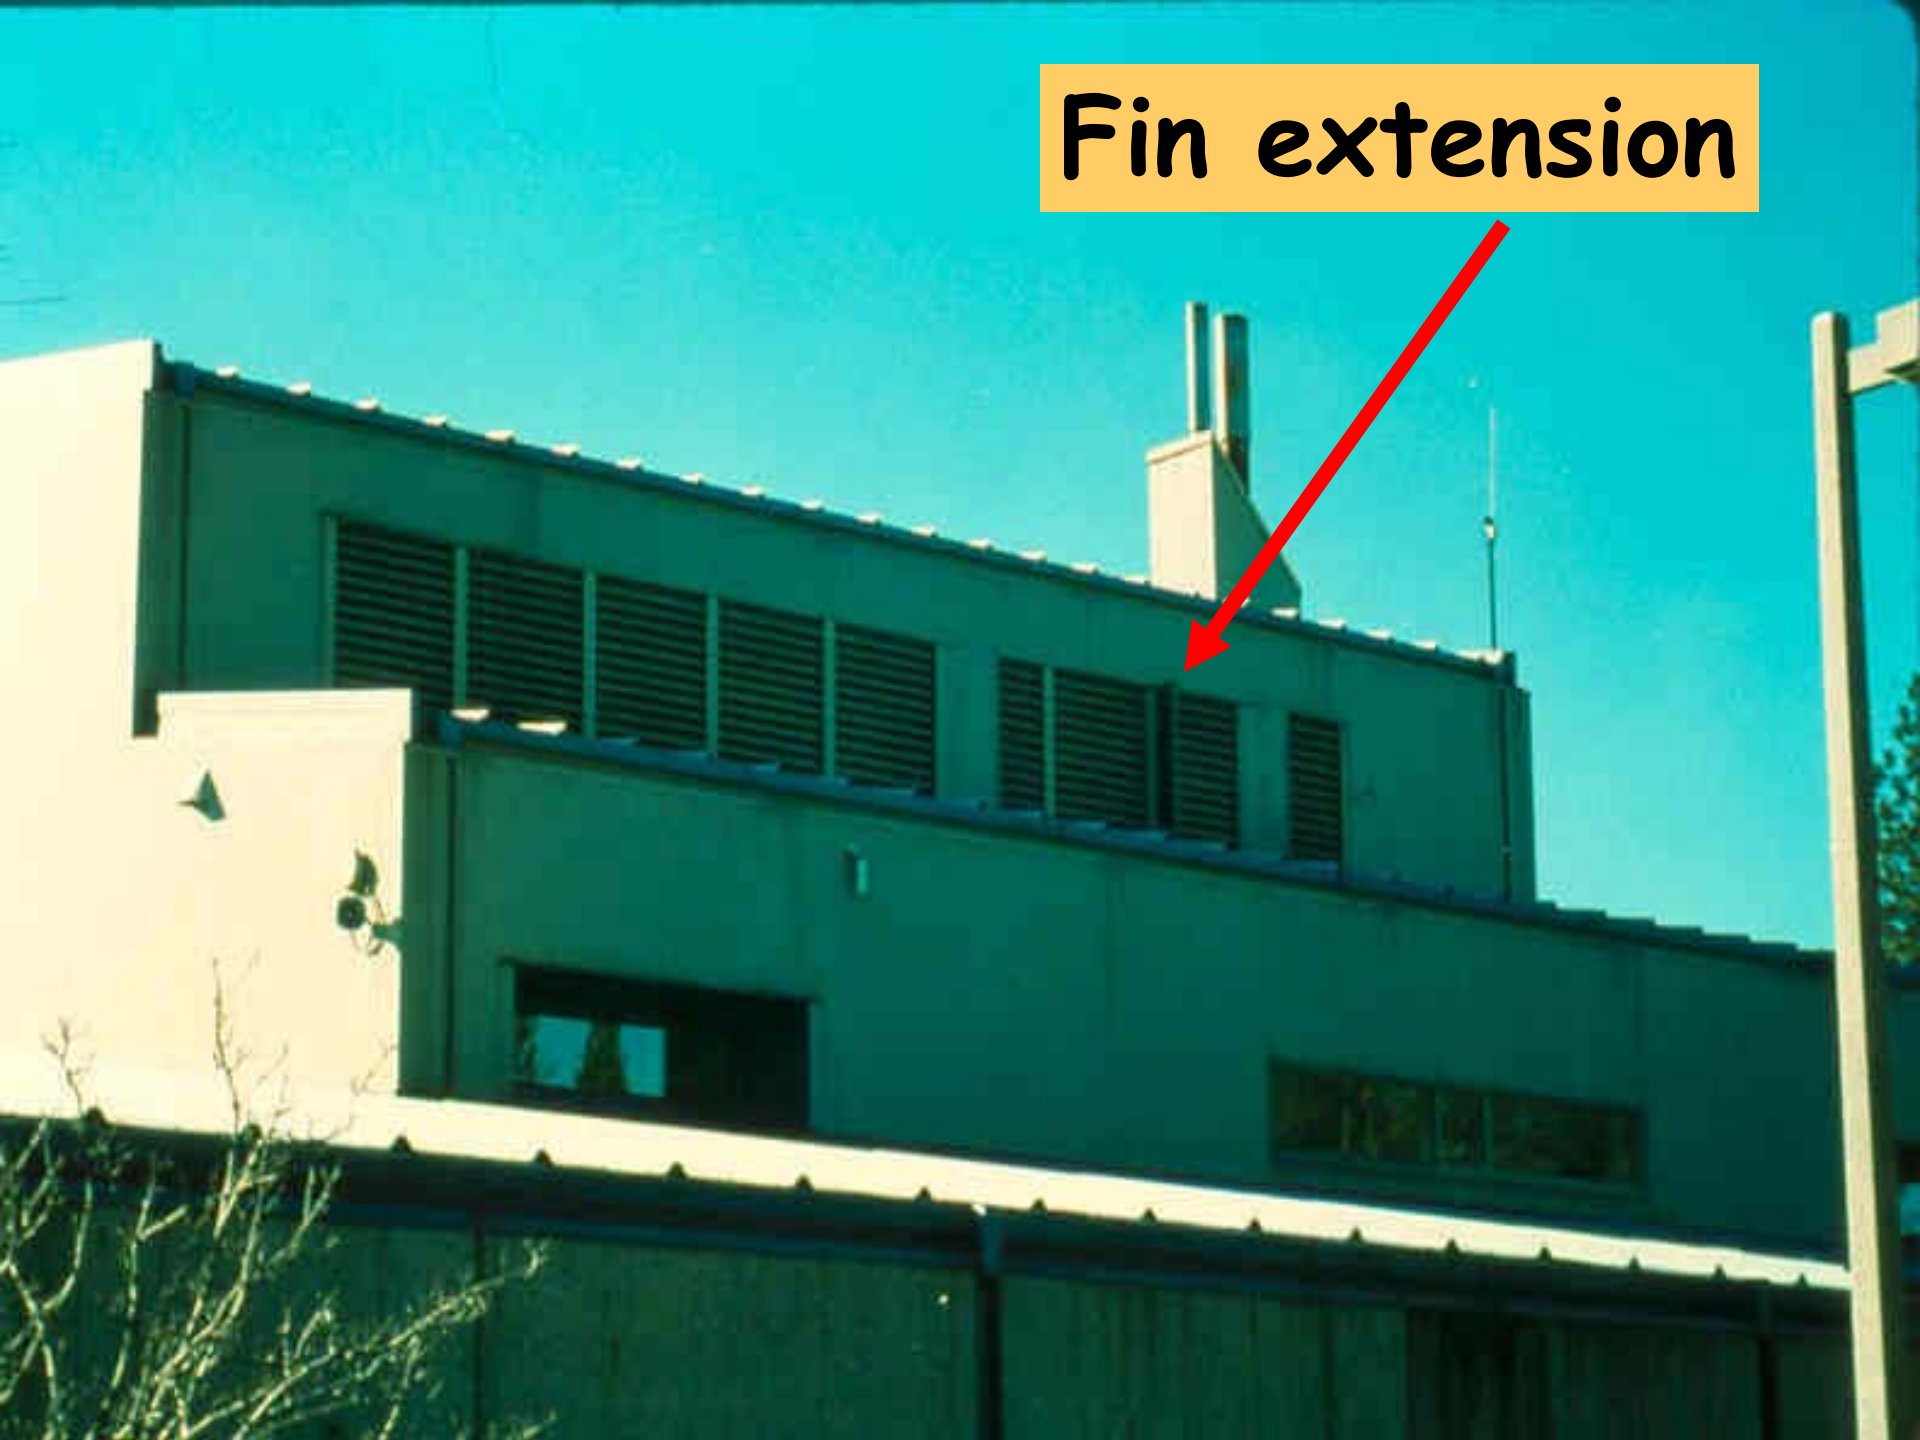
Air Intake

Clean the Air Intake

YMCA CO2 3000 ppm…how come?



Re-entrainment case study



Fin extension

intakes

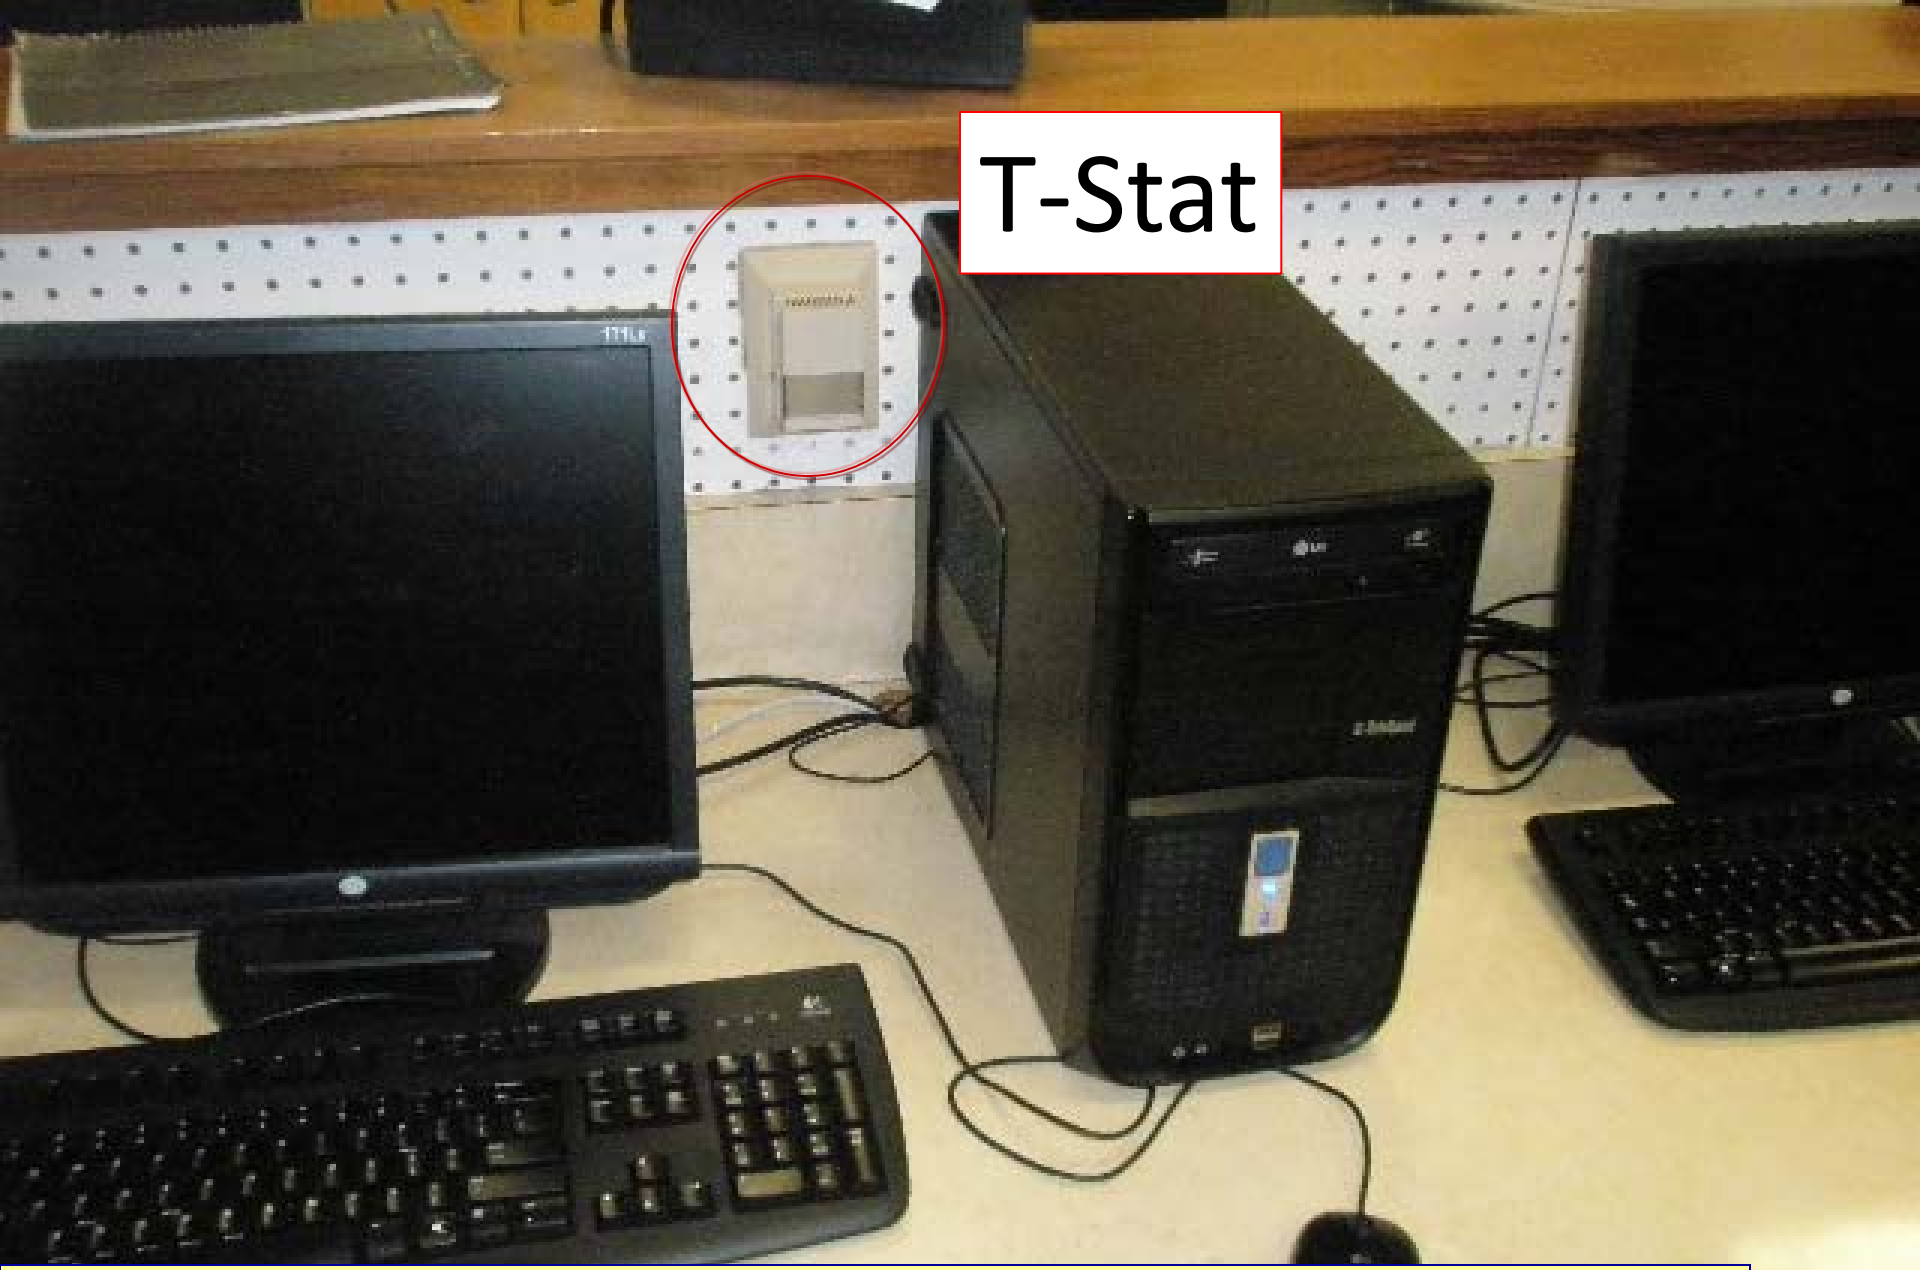
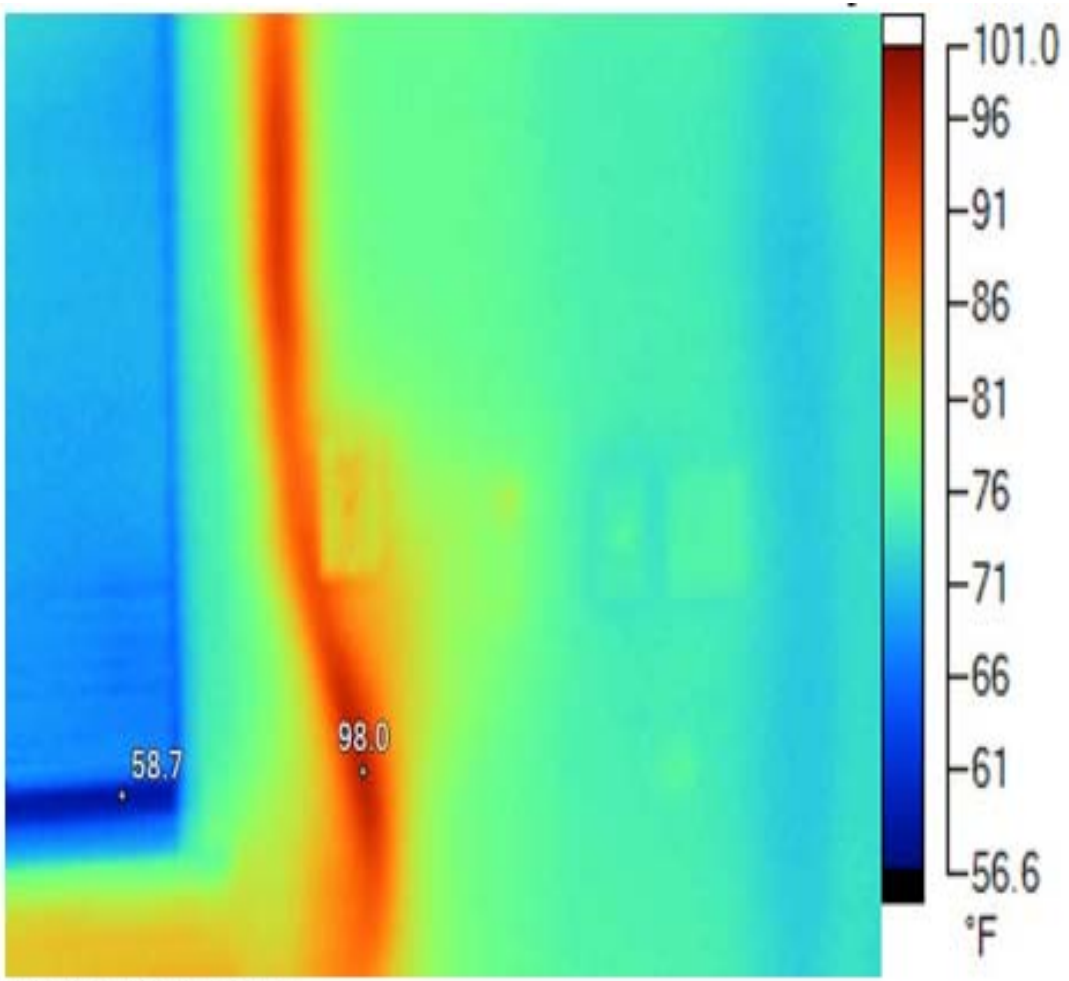
Heat



Classroom always too cold !



IR000802.IS2

Visible Light Image

Office always cold – IR scan easily identified a 98° F heat source in wall directly behind thermostat

(note 58° F window temp)

Importance of **Mean Radiant Temperature**

warm "objects" ***radiate*** to "cold objects"

Heat *from* person

Heat *to* person

Surface Temperatures (°F)

Ceiling 70°

Floor 65°

Wall #1 65°

Wall #2 68°

Wall #3 45°

Wall #4 55°

TOTAL 368 divided by 6 surfaces = 61.3 F°

- Radiant heat transfer is typically dominant over that of convection
- To create an environment with an effective comfort temperature of 70°F, for every one degree Fahrenheit that the average surface temperature is below 70°, need to raise the air temperature 1.4°F to compensate for the radiant cooling of those cooler surfaces

- Similarly, for every degree above 70° in MRT would allow us to reduce the air temperature by 1.4° and still maintain the same level of comfort.

Equivalent MRT and Air Temperature for a feeling of 70 F

MRT	50	55	60	65	68	69	70	71	72	70	75	80
Air Temp	98	91	84	77	72.8	71.4	70	70	68.6	67.2	63	56
